Dutch textile SMEs have the knowledge, but no shared system to work together

11,000+

companies registered in Dutch textile categories

50 / 50

split between retail & wholesale and manufacturing & production

€700M+

EU research funding in textile, leather, footwear and clothing with Dutch involvement, past 10 years

- Regional hubs work in isolation on their own issues
- No institutional memory: everyone reinvents the wheel
- Innovation stays in-house, out of fear of competitors

WHY NOW

Regulation, an ageing workforce and AI are hitting SMEs at the same time

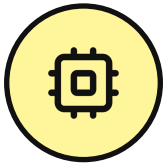

New EU rules

ESPR- Digital Product Passport and EPR/UPV demand product and material data most SMEs do not yet collect.

Ageing workforce

Production know-how lives in the heads and hands of technicians, and is retiring with them.

AI and digitalisation

New tools are arriving, but they are built for companies with data teams and proprietary systems.

Without shared knowledge, every SME faces these shifts alone.

Building TOS

Jaap Zandbergen

Troy Nachtigall

Borre Akkersdijk

TOS13 builds upon WoTO and NewTexEco: from a showroom, to a network, to a national fieldlab

01

WoTO

the showroom

BYBORRE's Window of Textile Opportunities: machine makers, suppliers, universities and creators working side by side.

Started by
BYBORRE

02

NewTexEco

the network

A national textile ecosystem. Its TELL infrastructure identifies who the Dutch textile companies are and where they sit in the chain.

Started by
ArtEZ, HvA/AMFI, Saxion

03

TOS13

the fieldlab

TOS outgrew the original scope. The NewWoto plan became something bigger, an orchestration system for the NL Textile sector.

Led by
TU/e with 30+ partners

IMPACT

SMEs gain value they cannot create alone

1

Compliance

Less work preparing product and material data for DPP, ESPR and EPR/UPV.

2

Operations

Less information lost between design, production, repair, reuse and end-of-life.

3

Markets

New circular services: repair, remake, resale, reuse, recycling and data-backed transparency.

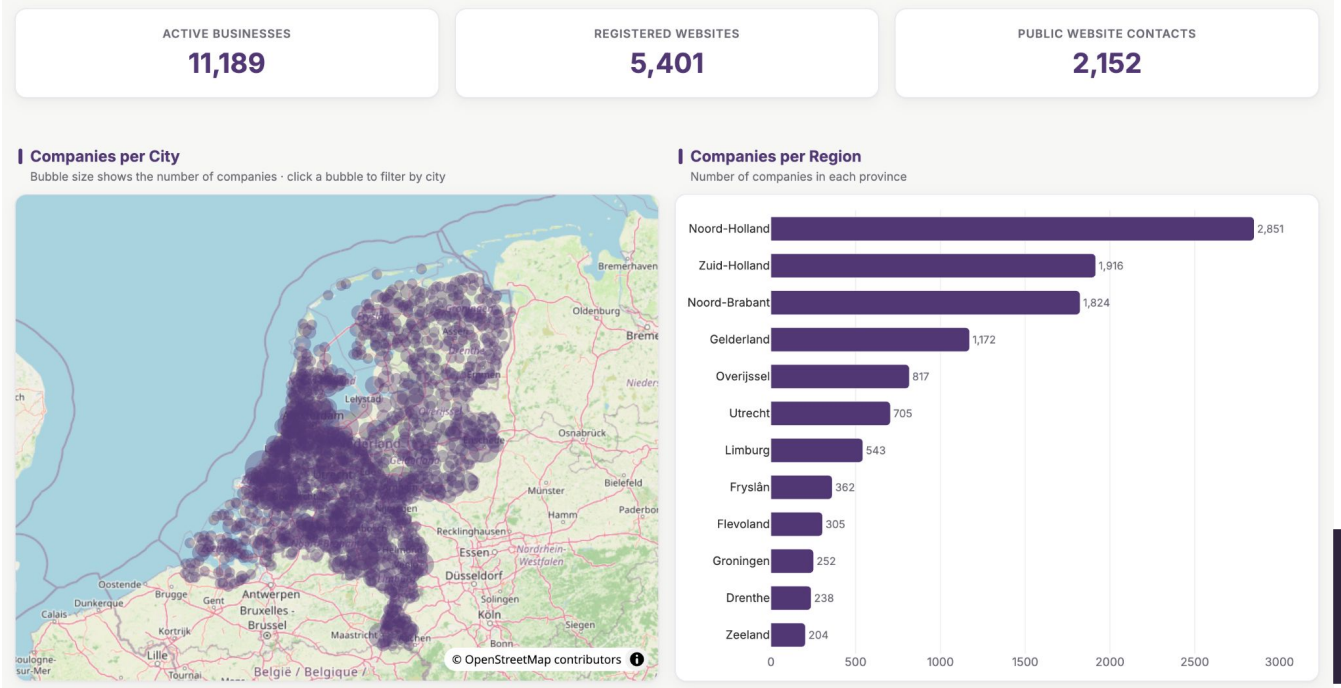

4

The whole sector

Shared standards, data agreements, demonstrators and playbooks that more companies can join after 2027.

There is a deep complexity in the NL and EU textile ecosystem

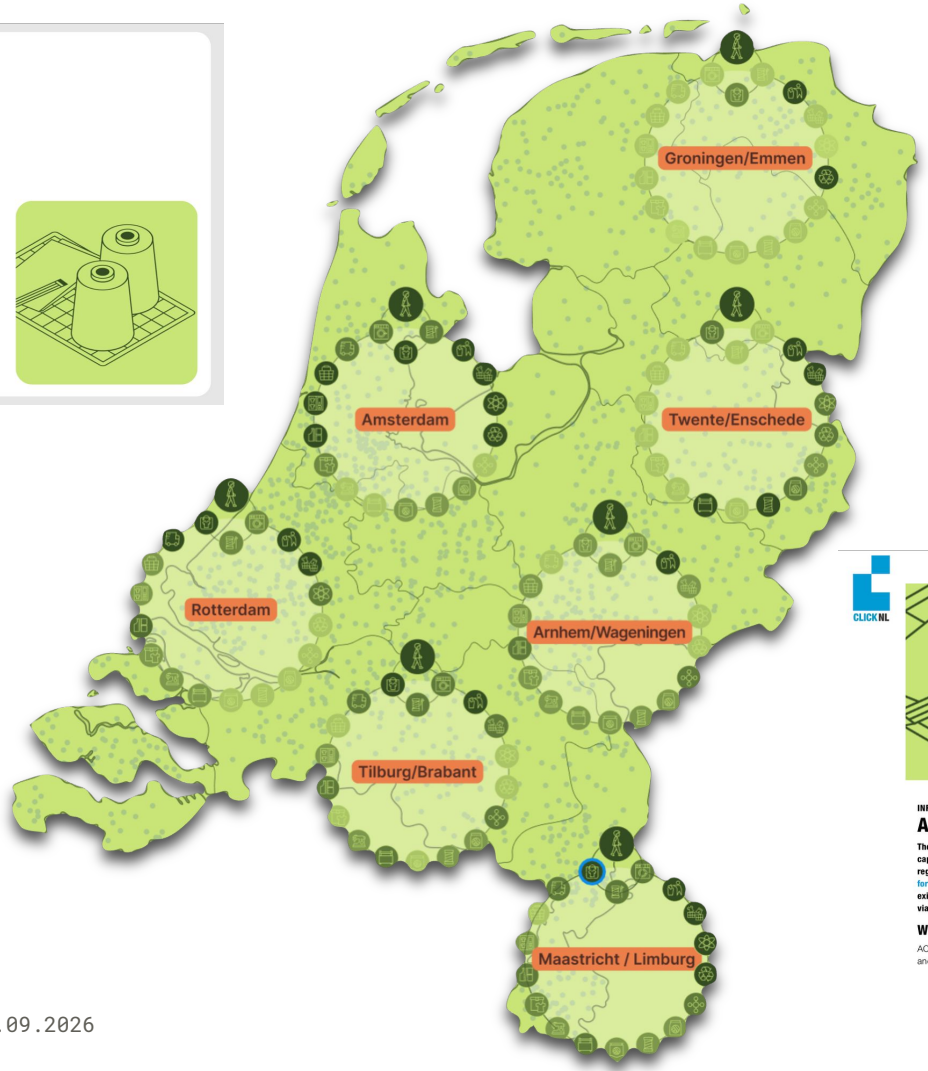

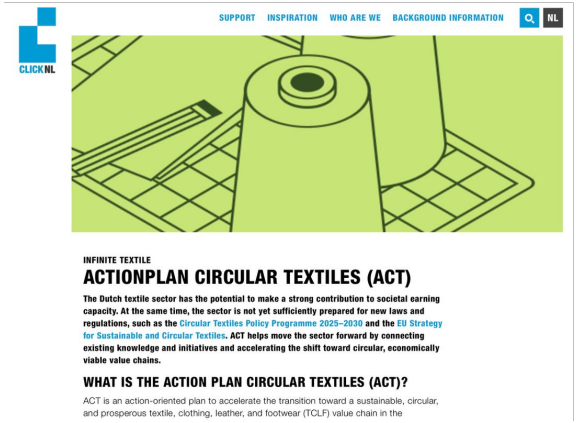

Infinite Textile

An integrated action plan for a prosperous TCLF sector

May 2025

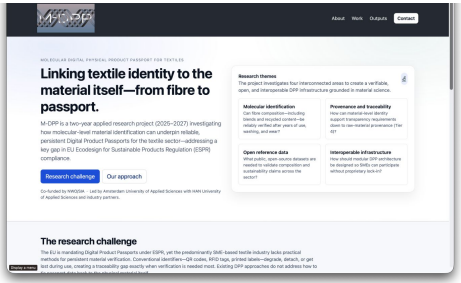

The Circular Textile Action Plan presents an ambitious roadmap for the Dutch textile, clothing, leather and footwear industry (TCLF) towards 2040

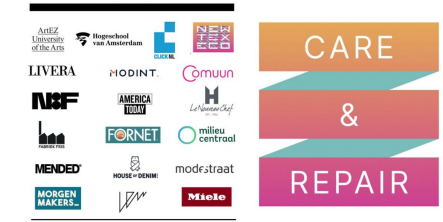

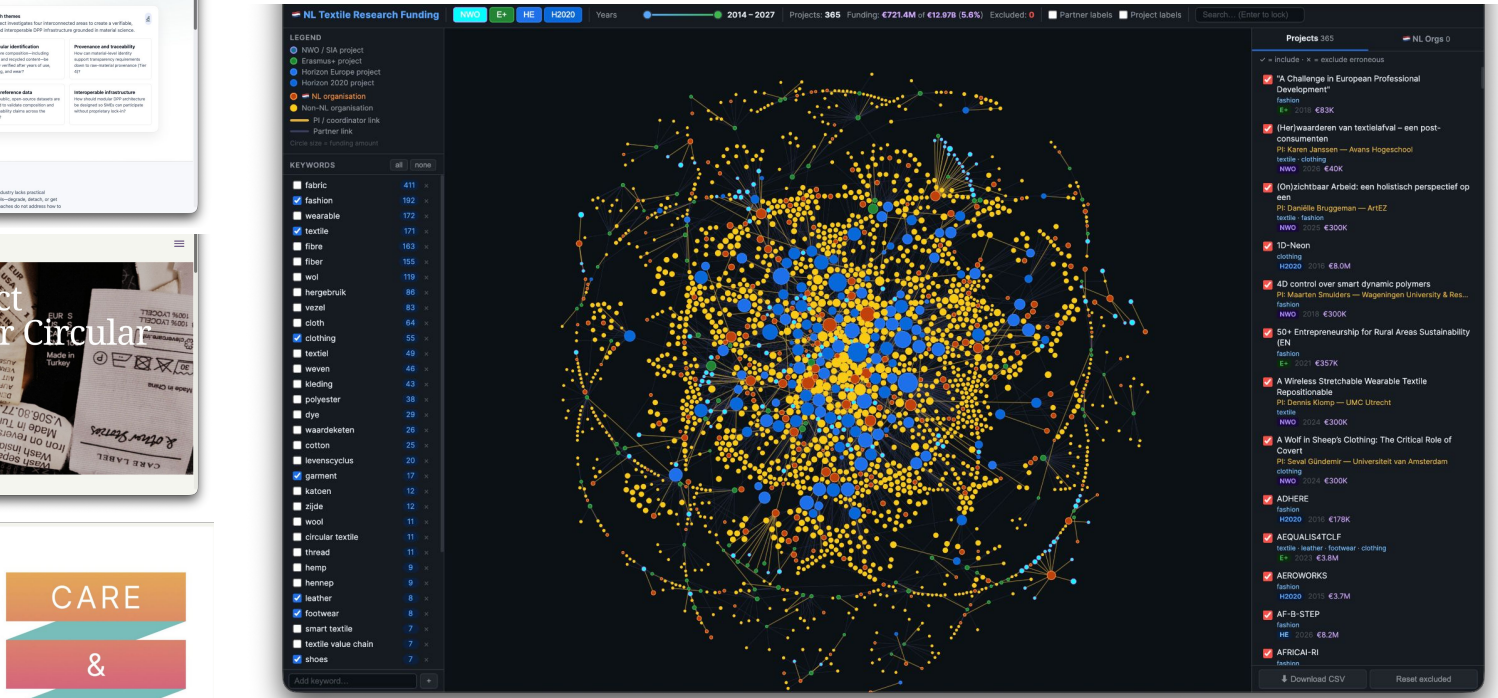

T 0 S 1 3

Completes a Portfolio of Projects from NewTexEco

CARE & REPAIR

WHAT TOS13 IS

TOS13 builds a shared digital orchestration layer for the NL textile sector that works with people, machines and waste

CENTRAL KNOWLEDGE QUESTION

How can we use data to create a sector-level digital orchestration layer that helps Dutch textile SMEs create impact and profitability, and collaborate across design, product, material, production, use, re-use and end-of-life?

3

work packages, one integrated demonstrator

18

partner organisations

THE THREE

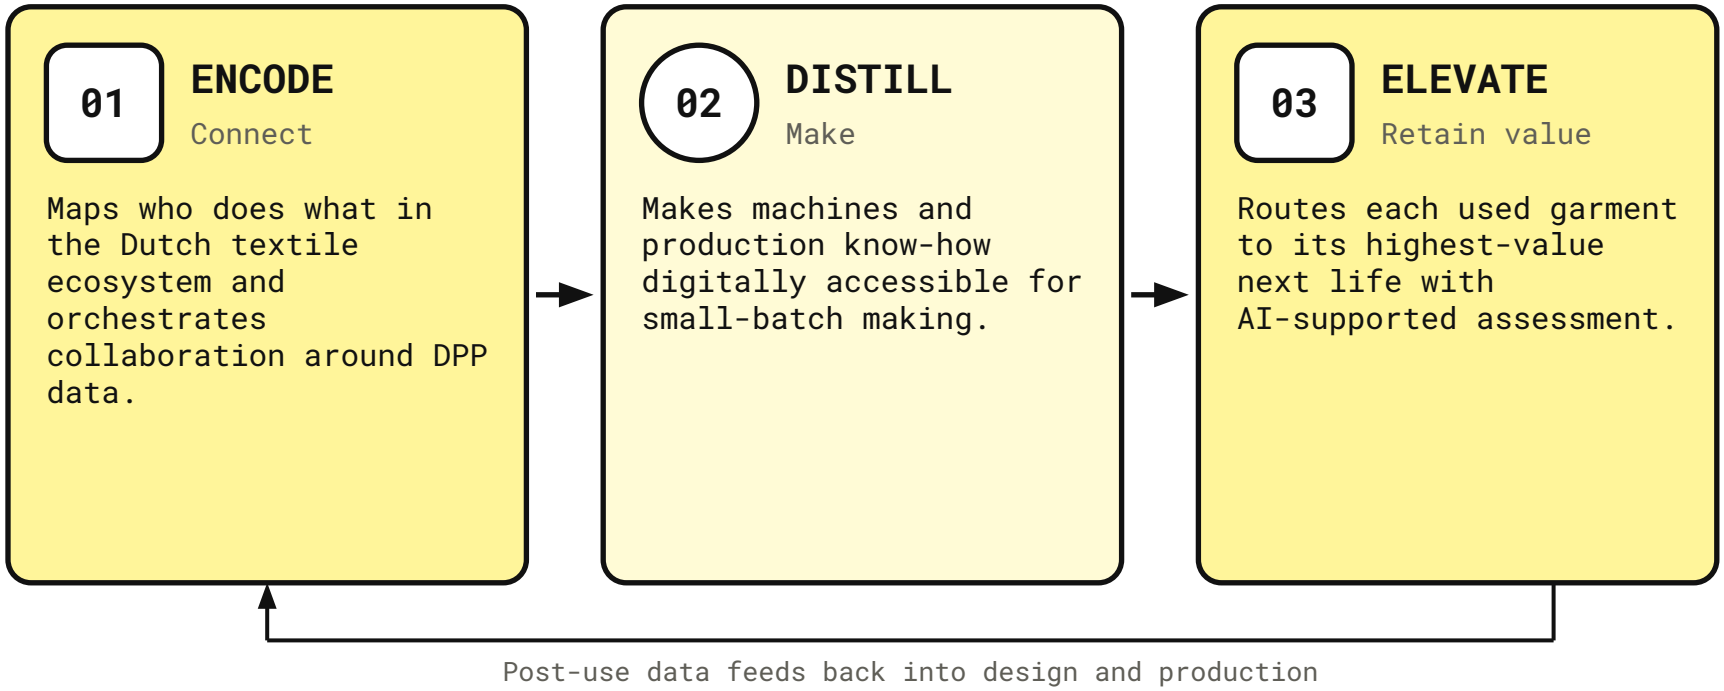

Work packages

01 ENCODE

02 DISTILL

03 ELEVATE

Three work packages follow textile data from design to production to second life

Helping textile companies find each other and share DPP-ready data

01

ENCODE

An orchestration platform that connects Dutch circular textile partners through the TELL data infrastructure.

With Patience Studio, EnhanceThat, HvA, NewTexEco Partners, TextielLab Tilburg, Fashion Tech Farm

USE CASE

Collaboration starts with finding each other among 11,000 companies. WP1 maps partners to the DPP steps and matches SME questions to knowledge and capacity.

WHAT WE DELIVER

- [x] Ecosystem map and manufacturer/capacity database
- [ ] DPP-step mapping and a minimum data-field set
- [x] Orchestration prototype, built in 3+ test cycles with SMEs
- [ ] Physical demonstrator at the Textile Campus Tilburg

Turning the tacit knowledge of machines and operators into reusable data

02 **DISTILL**

Data-enabled hybrid digital-physical manufacturing that plugs into digital supply chains and digital twins.

With Vlisco, Vodde, TextielLab Tilburg, Hollanders Printing Solutions, Saxion

USE CASE

Vlisco case: a modular textile/print prototyping machine for small-batch prints, built on production and digital-twin data.

WHAT WE DELIVER

- [x] Tested design-to-production scenarios with SME partners
- [ ] Data-enabled machine configurations with telemetry
- [x] Shop-floor capture of technician and operator knowledge
- [ ] Workflow template for small-batch, adaptive production

Routing every used garment to its highest-value next life

03

ELEVATE

A traffic-control system for value retention: AI assessment decides between repair, reuse, resale, upcycling and recycling.

With ValueSort.ai United Repair Centre, Greenful, Saxion, Stichting TexPlus, NXP, Artez VNYX

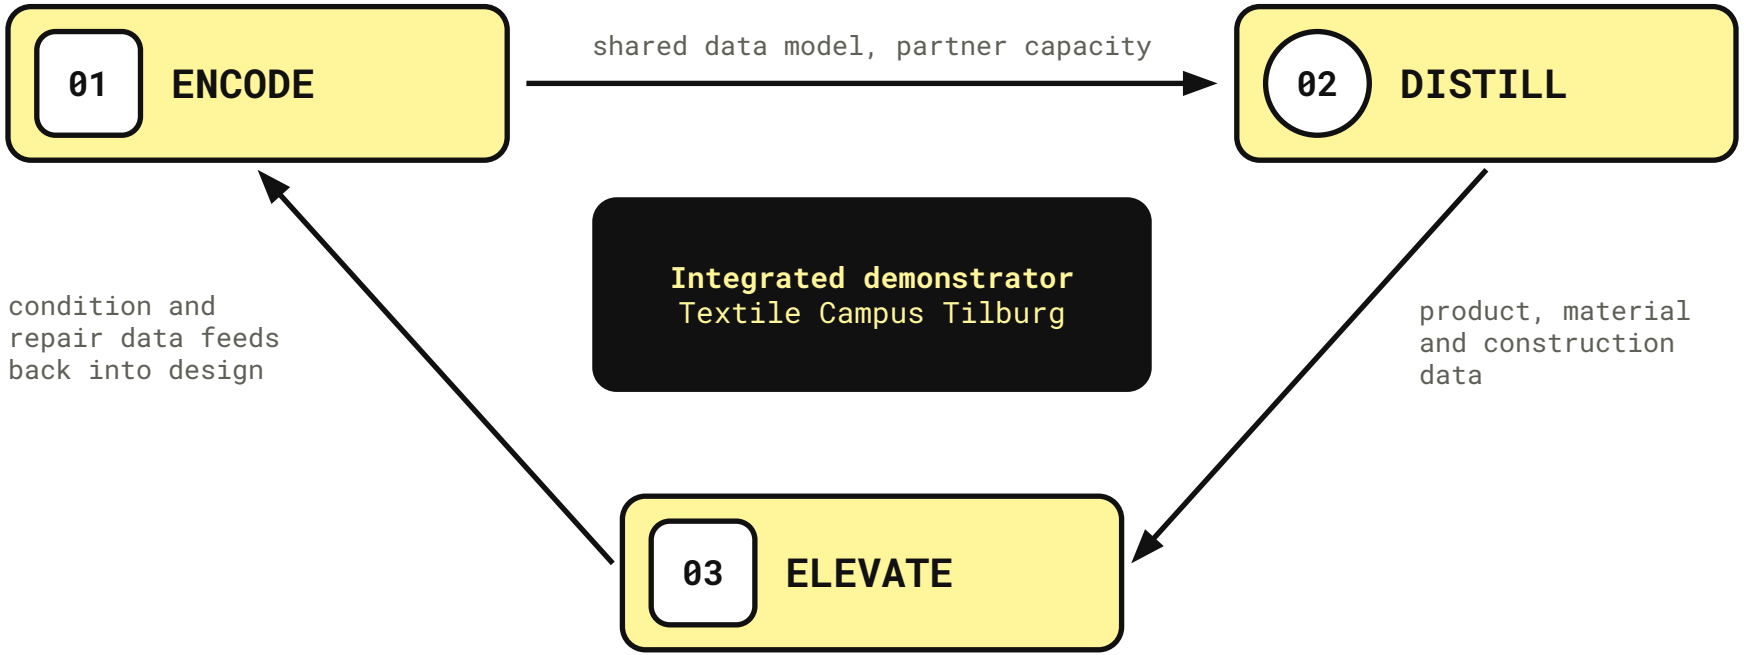

USE CASE

United Repair Centre: automated intake and damage assessment from garment photos, smart job routing and before/after quality control.

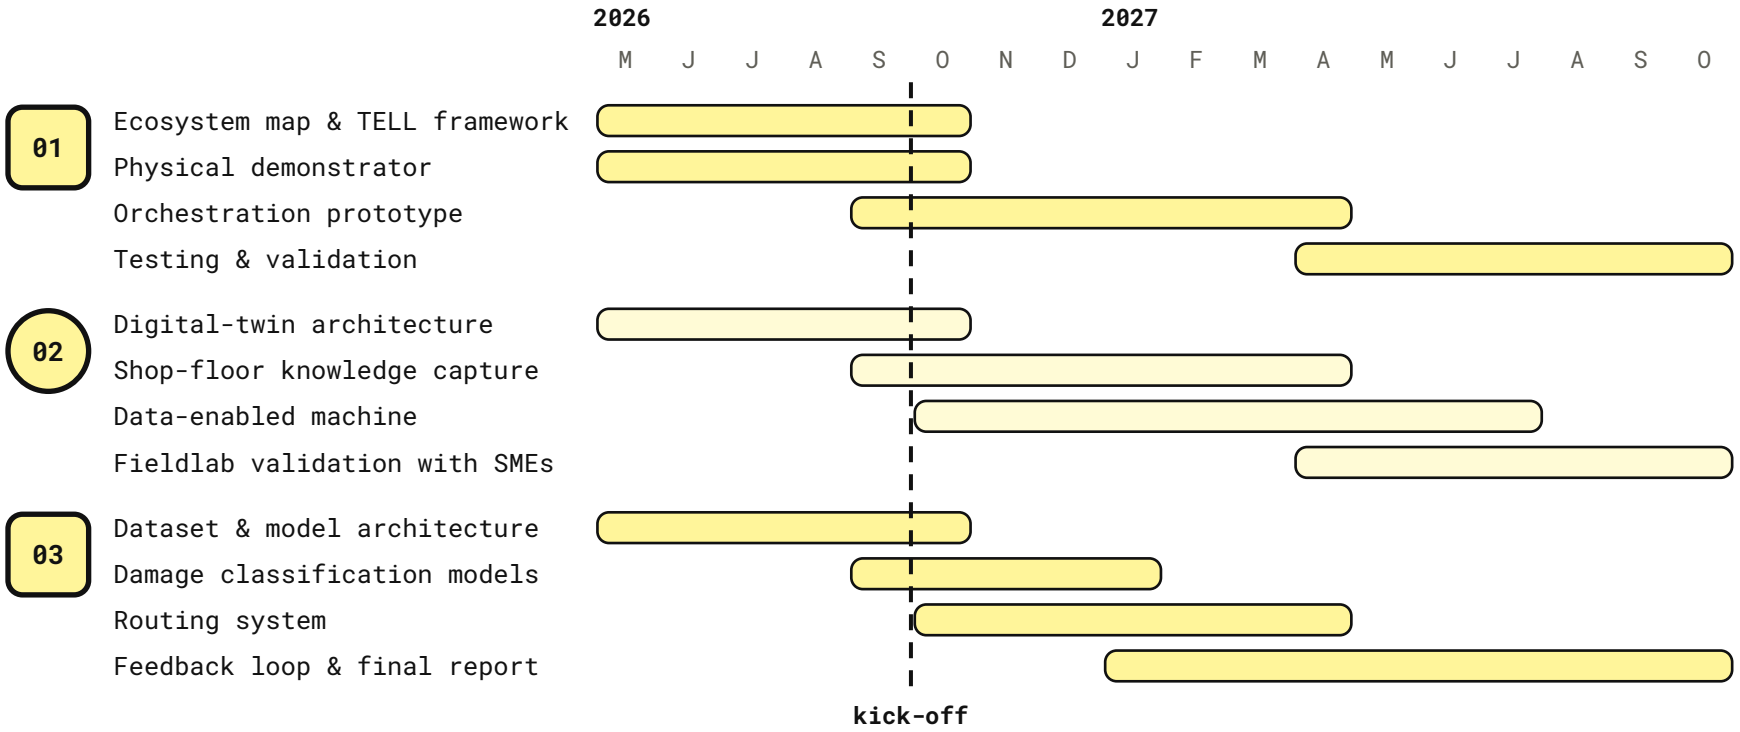

WHAT WE DELIVER

- [x] Intake and assessment data protocol for 5+ garment types
- [ ] Labelled image dataset for damage classification
- [x] Validated routing criteria across the R-ladder
- [ ] Evidence protocols for EPR reporting

The work packages meet in one demonstrator where data travels from design to second life and back

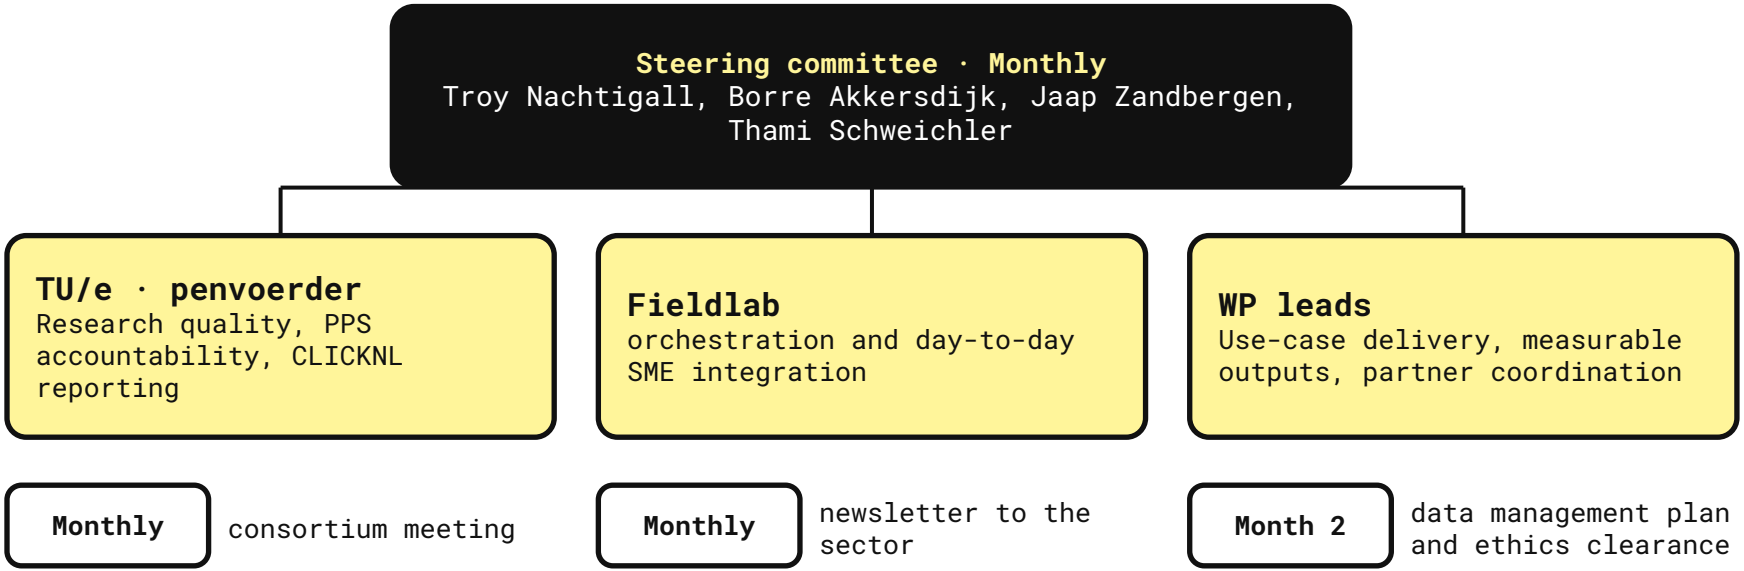

An 18-month roadmap: architecture first, then prototypes, then validation with SMEs

Plan as submitted to CLICKNL (M1 = May 2026). The steering committee re-baselines the timeline after today.

WORKING TOGETHER

A biweekly steering committee and monthly consortium meetings keep the work packages aligned

Also: a data & standards group, an SME advisory function and a cross-WP integration function.

DATA AND IP

Partners keep control of their know-how while generalised knowledge moves through the sector

OPEN / SHARED

- Generalised methods, playbooks and publications
- Open/FAIR datasets where agreed and ethically safe
- Reusable collaboration and data-agreement templates
- Sector demonstrators that invite adoption

CONTROLLED / CONFIDENTIAL

- Company Background and production know-how
- Partner product data, capacity and costs
- Patentable Foreground before protection decisions
- Commercial licensing or transfer negotiations

The Garment That Knows Too Much
FIELD LAB
TEXTILE OPPORTUNITY SPACE 13 (TOS13)
Main partners: ArtEZ University of the Arts, Hogeschool van Amsterdam, Technische Universiteit Eindhoven, TextielLab Tilburg, Hollanders, Vodde, Fashion Tech Farm, Vlisco, Sympany, Code for Good, United Repair Center, Settels Savenije Group, Greenful, Hogeschool Saxion, Patience Studio, EnhanceThat, NewTexEco, ACT, Gemeente Tilburg

WHERE WE ARE HEADING

Our textile future: a Textile Opportunity Space in every region

1

Space in every region

Municipalities open shared places, like the Textile Campus Tilburg, where makers, machines and materials meet.

2

Shared research

Government funds knowledge centres that research with and for textile companies, and share what they learn.

3

Industry innovates

Companies build shared infrastructure and innovate in their own projects, on common data and agreements.

Local, regional and national investment pull in one direction.

NEXT STEPS

How everyone can take part after today

1

Join us

Tell us how your questions: hello@space13.to.

2

Become an associate partner

Companies and organisations outside the consortium can join the fieldlab network.

3

Bring your case

A practical question from your company that the fieldlab can work on.

4

Visit the fieldlab

See the demonstrator and machines at the Textile Campus Tilburg as they are built.

5

Read the newsletter

Monthly progress from the fieldlab, for the whole sector.

6

Spread the word

Follow and share space13.to and linkedin.com/company/space13.
